

Pre K-5 Math Curriculum Newsletter May 2023

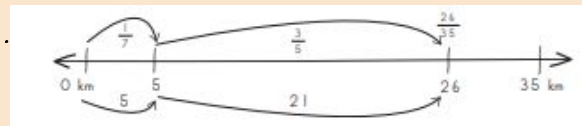

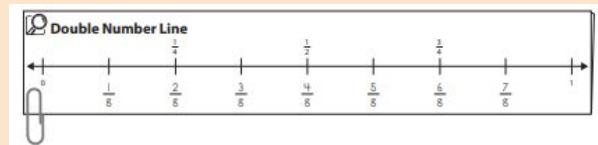

Staff Spotlight

This month I would like to highlight a teacher that is going above and beyond. Beth Beaudoin is the math interventionist for West Stafford and Stafford Elementary. Each month, she works to send home family math games to all of our kindergarten students. Students get all they need to play with their families and they really love the games! Thank you Beth!

Model of the Month: Double Number Line

A special number line offers students a way to visualize fractional increments on this familiar yet powerful model. Just as the open number line allows students to visualize the relationships among multipliers, the special number line for fractions invites them to explore the relationships among different fractions. As they divide the number line into fractional increments, they find out where the positions of various fractions "line up."

May Number Corner Previews

Each 30-minute video features an overview of the concepts and ideas for the month, a preview of each workout, and practical tips for organization and effective facilitation for Grades K-5.

The Sky is Not the Limit!

Erin and I want to send teachers a huge thank you for all your support for the recent Literacy and Numeracy Night. Families really seemed to have a great time! Your activities received great reviews!

Next year, we will form a committee to help us think of the theme and plan for the event. It takes a village, and we are so lucky to have all of your support!
